

Case Study

HENKEL × VEGAM

A SMART FACTORY SUCCESS STORY

Vegam partnered with Henkel to co-develop and scale a digital manufacturing platform tailored to Henkel's complex global adhesive operations, building on a trusted collaboration that began in 2007.

About the Client

Henkel Adhesive Technologies is a global leader in adhesives, operating 134 manufacturing sites worldwide and serving over 800 industry verticals. Its product lines span automotive, packaging, construction, electronics, and more.

Henkel's goal was to unify its broad and customized asset base under a scalable digital strategy that supports operational efficiency, real-time data access, and standardized visibility across all manufacturing sites.

Key Challenges Faced by Henkel Before Vegam

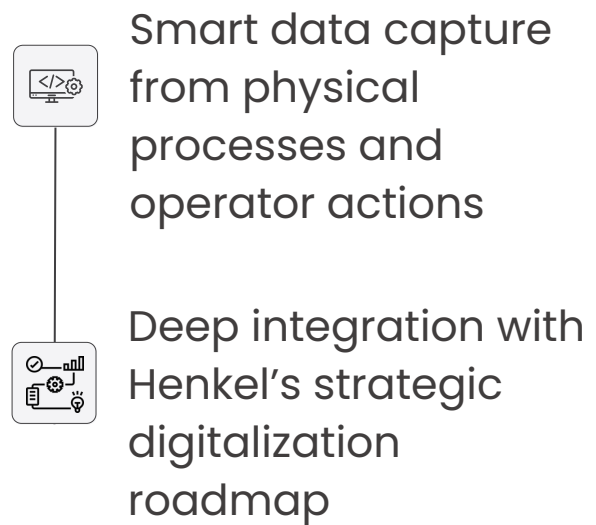

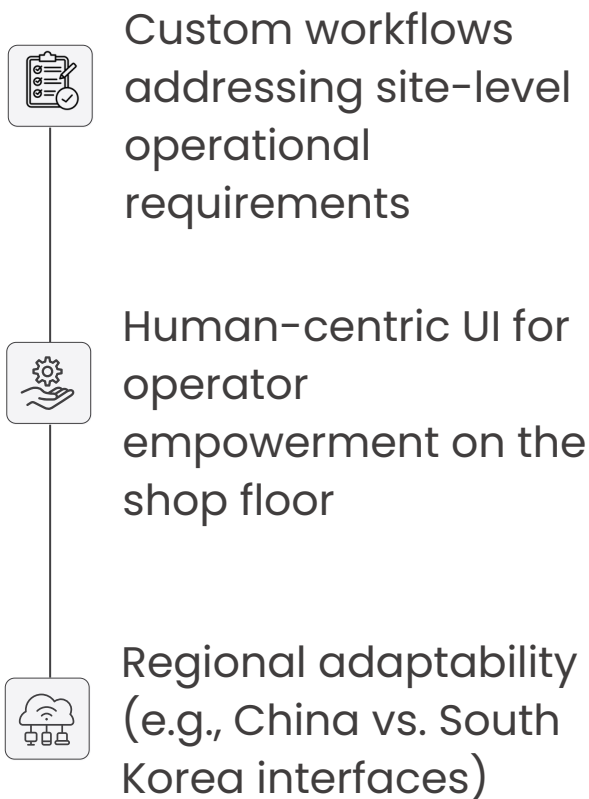

Henkel's digital transformation team encountered multiple challenges:

- A partially customized asset base across all sites
- Difficulty in applying consistent data standards across varied environments
- Need for unbiased, real-time data from both human and machine sources
- The complexity of change management across plants and regions
- Gaps in operator-level digital empowerment and training tools

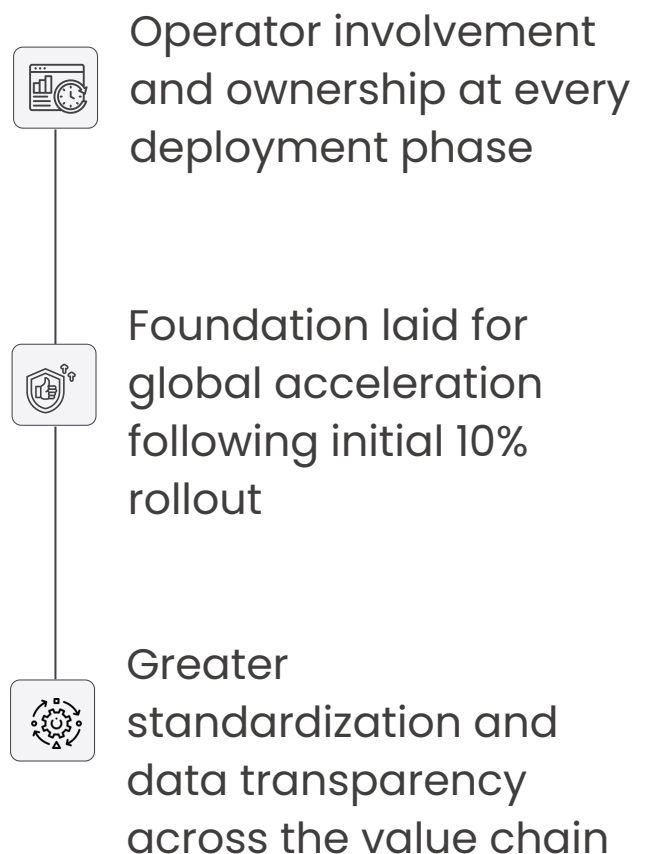

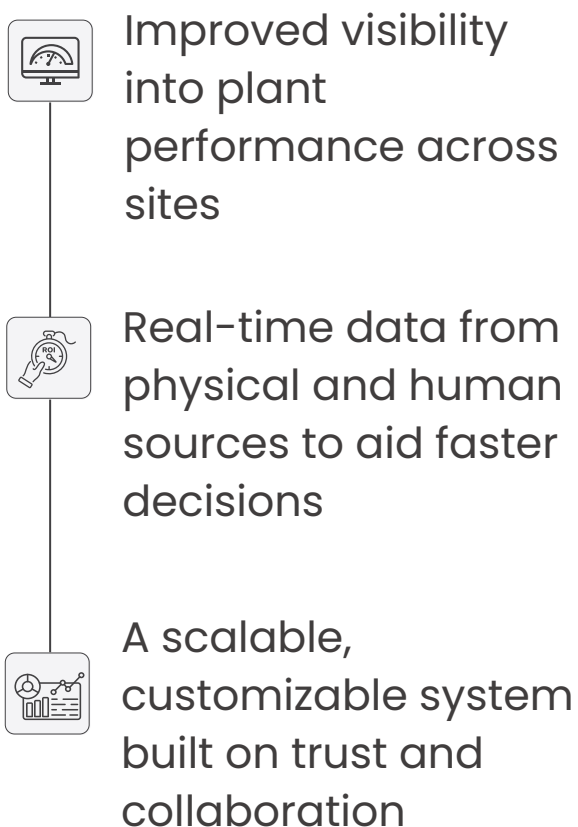

What Did Vegam Do?

Vegam deployed its Smart Factory Solution (SFS) platform, developed through a long-term collaboration with Henkel. After successful deployments across ~10% of Henkel's global footprint, the system is now being scaled globally.

Value & Outcomes Delivered

Björn Jackisch

VP of Operations & Supply Chain, APAC,
Henkel

“

Our teams in Asia-Pacific, where I am based, welcomed the digital changes with enthusiasm. Once they saw how data could help with their daily tasks, they naturally started using it
